## **VelocityOne Flight Recovery Tool**

Rev.: 1.3.3 Last Updated: 19 Oct 2022

Please note, this process only applies to mass production hardware that is unable to exit Update Mode. For example, if you attempt an update via the Control Center app, and there is an issue, and the app no longer detects the product, this recovery tool will restore firmware build 1.3.3

## 1. You will need:

- 1. PC running Windows 10/11 with all critical updates installed.
- 2. VelocityOne Flight Recovery Tool V1.3.3 (unzipped).
- 3. VelocityOne Flight
- 4. VelocityOne Flight USB connection cables.

## 2. Recovery Process:

This process assumes the quadrant is connected to the yoke base using the blue cable, and when the red cable is connected to the host (console/PC), the screen will only say 'UPDATE MODE'.

- 1. Connect the Quadrant to the Yoke, then connect the Yoke to the Windows PC.
- 2. On your PC, you may need to go to **Settings > Update & Security > For developers** and enable **Developer Mode**. It's important to turn this off once you are finished with the Recovery Tool.

8. Click the Start button in Windows, locate the newest version of the **Recovery Tool** and open it.

9. Click the Update button. The progress bar will start to fill.

- 10. The process will take approx. 7 minutes. During this time, **DO NOT CLICK OFF the app** or minimize it. Keep it as the <u>active</u> window in focus on your machine. If you click off the recovery window, you will need to restart the update process.
- 11. After the update, the product will reboot into standard operating mode (Xbox). Go to Input Mode in the FMD Settings menu to select the desired mode.
- 12. On your PC, remember to Disable **Developer Mode**. It's important to turn this off once you are finished with the Recovery Tool because it can present a security risk to your system if left on.

The product is now ready to use.
